

Oxia Planum

Portfolio complet des figures sauvegardées

Chaque page reprend une sortie graphique conservée dans le carnet uodatednees.ipynb. Les légendes détaillées et les calculs associés se trouvent dans le rapport intégral.

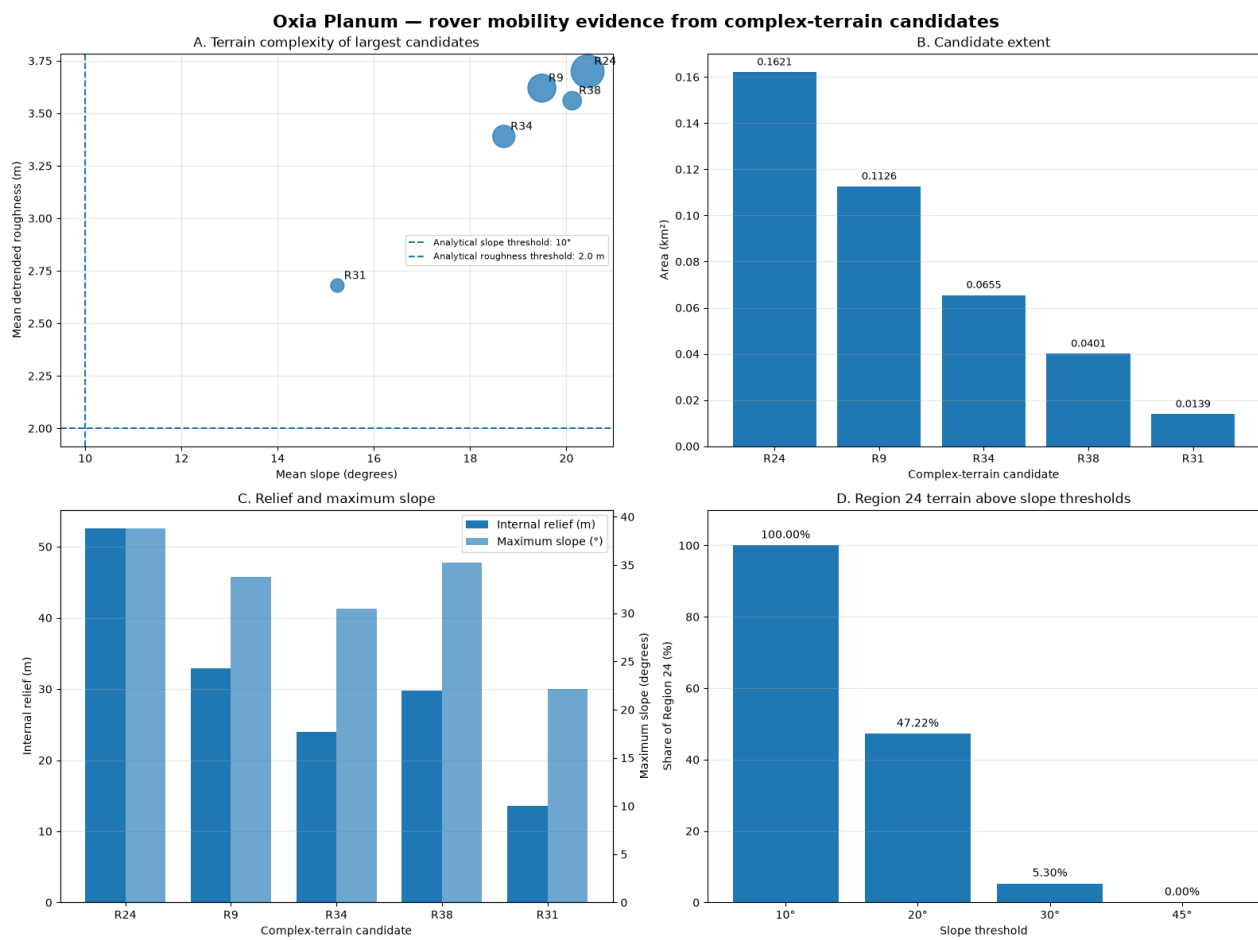

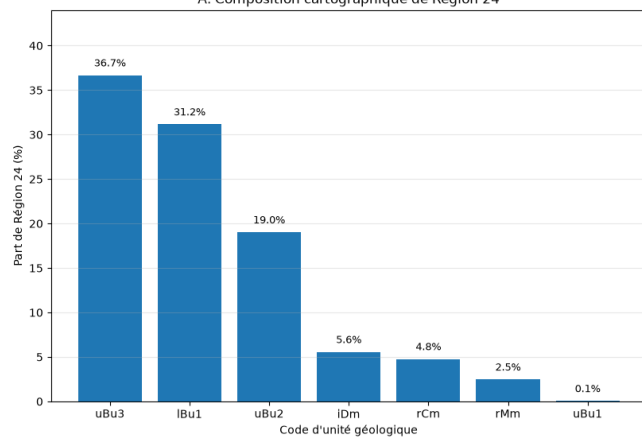

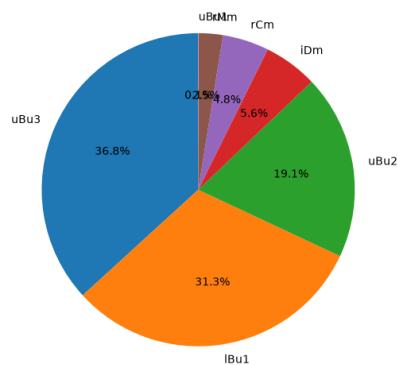

Figure 32. Sortie graphique de la cellule 156.

Oxia Planum — Région 24 : contexte géologique et limites minéralogiques

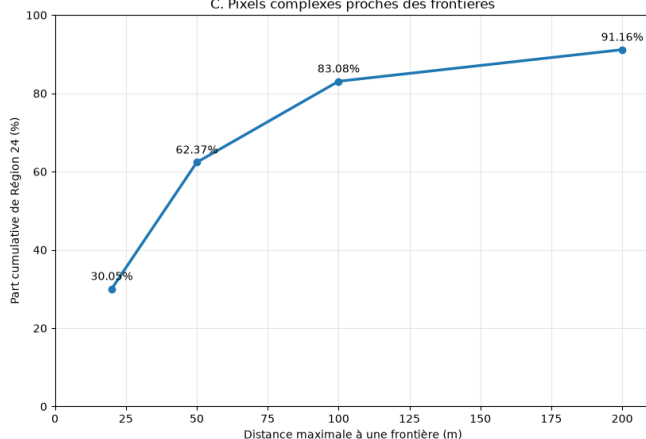

A. Composition cartographique de Région 24

B. Répartition des unités cartographiées

C. Pixels complexes proches des frontières

CE QUE LES DONNÉES MONTRENT

- Région 24 traverse 7 unités cartographiques.
- uBu3 et lBu1 couvrent ensemble ~67.8 % de la région.
- 62.37 % des pixels complexes sont à moins de 50 m d'une frontière cartographique.

CE QUE LES DONNÉES NE PROUVENT PAS

- Une frontière n'est pas automatiquement une anomalie.
- Une unité cartographique n'identifie pas directement un minéral précis.
- Aucune association statistique n'est confirmée sans comparaison avec une zone de référence.
